Page 8 Practical Report

Debugging, Review and Evidence

Date: 21 October 2026

Objective

Reproduce a status-filter issue, apply a focused fix, verify expected behavior, and record test evidence.

Implementation Summary

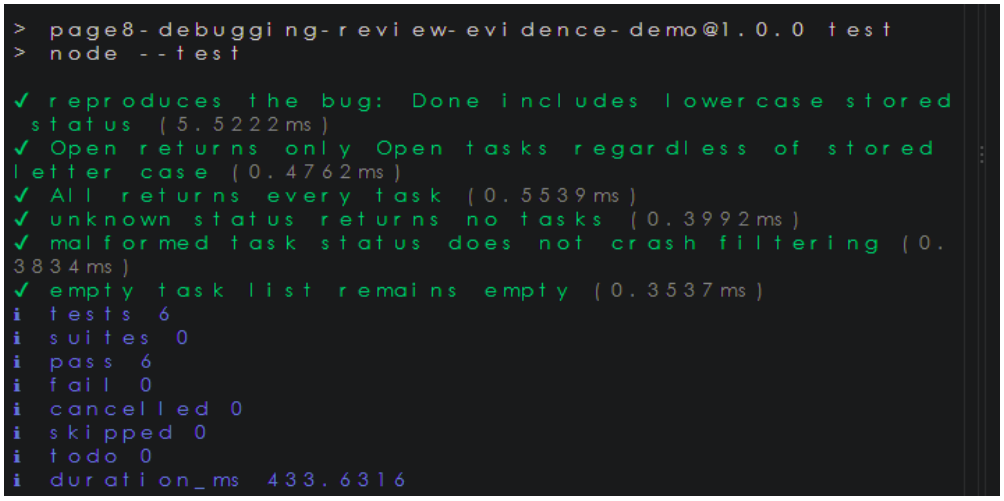
Component	Implemented behavior
Status filter fix	Compares status values without depending on letter case, so selecting Done includes stored values such as done.
Regression coverage	Tests Done, Open, All, unknown status, malformed task status, and an empty task list.
Debugging workflow	Uses Reproduce → Relevant error → Hypothesis → Focused change → Verify → Regression check.
Evidence report template	Provides fields for revision, exact checks, results, checks not run, known limitations, and next action.

Verification Results

Total Tests	Passed	Failed	Result
6	6	0	**PASS**

Test Evidence

The terminal screenshot below shows 6 tests passed and 0 failed.



Conclusion

The status-filter fix and regression tests are complete. The recorded test run passed all six checks, covering expected filtering behavior and defensive handling of malformed or empty input.
